

Modbus RTU **FL128**

This module is designed to read and transmit data from the Floodline 128 series and make them available via the ModBus RTU protocol. It is a dedicated and specially prepared solution, mounted on a DIN rail, ensuring fast and efficient communication with supervisory systems and building BMS systems.

Modbus RTU **FL4-24**

This module is designed to read and transmit data from the Floodline 4-8-16 and FL24/X control panels and make them available from the ModBus RTU protocol level. It is a dedicated and specially prepared solution, mounted on a DIN rail, ensuring fast and efficient communication with supervisory systems and building BMS systems.

Modbus RTU **FL1-4**

This module is designed to read and transmit data from the Leak One V / Floodline 1 and Floodline 4 control panels and make them available from the ModBus RTU protocol level. It is a dedicated and specially prepared solution, mounted on a DIN rail, ensuring fast and efficient communication with supervisory systems and building BMS systems.
